

Tired of making adjustments?

Meet Norton Trinity™

The world's most  
intelligent door closer

Change is inevitable. And adjusting to change can be frustrating and time consuming. Especially when it involves your doors.... when they don't close and latch properly the HVAC works harder and a building's security can be compromised.

For Norton Trinity, change is second nature. Its on-board computer monitors and self-adjusts to changing environmental conditions. As if by magic, your doors will consistently close and latch at the right speed without manual intervention - saving you valuable time and money and keeping your building secure. And Trinity is so smart it does all this without the need for batteries or external power. This is one change you are going to welcome!
